Sage Pastel Serial Numbers

The Pastel Serial Number Tracking module allows users to keep track of individual inventory items that have serial numbers.

Serial number items are identical to physical inventory items, with one exception - each item has its own unique serial number.

With Pastel's Serial Number Tracking module, you can perform the following tasks:

- Track movement of individual inventory items through the system using unique serial numbers.
- Forced entry of a serial number for serialised stock items ensures a full and complete history of the movement of each individual stock item.
- Select per inventory item whether to serialise the individual item or not.
- Choose whether to allocate serial numbers to sales orders.
- Create sequential serial numbers by entering one serial number template and use the system to automatically create incrementing serial numbers, or enter serial numbers individually.
- Import serial numbers from a file.
- Print barcodes for serial numbers.
- Use the Count Inventory function to count physical serial items in stock against theoretical items on hand.

This screen shows that invoicing with serial numbers is as simple as selecting the serial number from an available list.

Accountants are a vital part of any organization. Summary of SAGE courses for beginners Study plan of the Sage Course Adaptation of this course. What qualifications will you get? Our program is specifically focused on training in such a way that the possibilities of approving AAT exams increase and enable you to obtain certification.
